FINK DATAWORKS / PORTFOLIO PROOF

INDUSTRIAL INVENTORY RESCUE

Evidence from an actual seven-worksheet Excel workbook. All inventory data is deliberately fictional; this is an independently built demonstration, not a paid client engagement.

133	133	408	55
source rows	rows preserved	logged edits	review records

Workbook contents

Sheet	What a reviewer can verify
START HERE	Purpose, scope and reading guide
DASHBOARD	Formula-driven quality metrics and category rollups
RAW INTAKE	Original records retained unchanged
CLEANED RECORDS	Normalized values and live status formulas
REVIEW QUEUE	Issues, severities and required follow-up
CHANGE LOG	Field-level before/after changes with rules
RULES & NOTES	Mapping assumptions and decision boundaries

Quality rule

Source data is never overwritten. Recognized SKU formatting, bin conventions and approved name aliases may be standardized; duplicate stock rows, unknown counts, negative quantities and ambiguous identifiers are explicitly flagged for human review.

The original .xlsx file is available separately for full inspection of worksheets, formulas, cell formatting and the complete audit trail. This PDF is a portable preview of the underlying evidence.

1 / Real record-level comparisons

Each example below comes directly from the source and cleaned datasets. Source IDs are stable across both files. No source record was merged or deleted.

Source ID	Raw SKU / bin	Normalized SKU / bin	On-hand / Status
IN-0001	SP1101 WH-D-01-01	SP-1101 WH-D-01-01	29 / READY
IN-0002	SP-1102 wh-c-02-03	SP-1102 WH-C-02-03	68 / READY
IN-0007	SP1107 wh-c-03-04	SP-1107 WH-C-03-04	[blank] / REVIEW
IN-0012	SP-?? B2-05	SP-?? WH-B-02-05	37 / REVIEW
IN-0015	SP 1115 A4-04	SP-1115 WH-A-04-04	TBD / REVIEW
IN-0027	SP1127 A2-04	SP-1127 WH-A-02-04	-3 / REVIEW
IN-0031	sp-1131 A1-02	SP-1131 WH-A-01-02	3 / READY
IN-0121	SP-1105 WH-D-04-03	SP-1105 WH-D-04-03	77 / REVIEW

2 / Exactly what changed

Examples from the field-level change log (408 total rows). Changes are categorized as safe normalization, not verified physical stock corrections.

Source ID	Field	Before	After
IN-0001	Part ID	SP1101	SP-1101
IN-0001	Category	Pwr Trans	Bearings & Power Transmission
IN-0001	Unit	pair	PAIR
IN-0002	Storage Bin	wh-c-02-03	WH-C-02-03
IN-0002	Supplier	MERIDIAN INDUSTRIAL	Meridian Industrial
IN-0003	Part ID	sp-1103	SP-1103

3 / Exception handling, not guesswork

The review queue contains 55 unresolved issues tied back to original source IDs. A finished cleanup is not a license to invent missing stock levels.

Source ID	Observed problem	Required action
IN-0007	Qty missing or text	Recount stock and approve a numeric quantity.
IN-0012	Sku unrecognized	Confirm correct master SKU.
IN-0015	Qty missing or text	Recount stock and approve a numeric quantity.
IN-0018	Location missing	Confirm storage location.
IN-0021	Reorder invalid	Confirm minimum stocking threshold.
IN-0026	Cost missing or text	Confirm latest unit cost in source system.
IN-0027	Negative quantity	Investigate transaction history; do not overwrite.
IN-0033	Category unknown	Ask client to choose an approved category.
IN-0035	Location invalid	Confirm and correct actual bin.

4 / Live Excel formulas and saved results

These formulas were read from cells in the actual workbook, not generated just for this PDF. Results below are the saved workbook calculations.

DASHBOARD!A6 Source row count = 133
```
=COUNTA('RAW INTAKE'!$A$6:$A$138)
```

DASHBOARD!D6 Records requiring review = 55
```
=COUNTIF('CLEANED RECORDS'!$N$6:$N$138,"REVIEW")
```

DASHBOARD!G6 Ready records = 78
```
=COUNTIF('CLEANED RECORDS'!$N$6:$N$138,"READY")
```

DASHBOARD!J6 Logged safe edits = 408
```
=COUNTA('CHANGE LOG'!$A$6:$A$413)
```

CLEANED RECORDS!N6 Release status = READY
```
=IF(M6>0,"REVIEW","READY")
```

CLEANED RECORDS!O6 Extended line value = 7783.89
```
=IF(AND(ISNUMBER(G6),G6>=0,ISNUMBER(I6),I6>=0),G6*I6,"")
```

CLEANED RECORDS!P6 Stock alert = OK
```
=IF(N6="REVIEW","CHECK",IF(AND(ISNUMBER(G6),ISNUMBER(H6)),IF(G6<H6,"LOW","OK"),"CHECK"))
```

5 / Independent verification checklist

For anyone reviewing the downloadable Excel workbook, here is an exact walkthrough of what to inspect.

01 Open RAW INTAKE

133 source records begin at row 6 and remain untouched.

02 Open CLEANED RECORDS

Match source IDs; inspect normalized fields and columns M:P for issue/status calculations.

03 Open CHANGE LOG

408 change records identify field, old value, new value and normalization rule.

04 Open REVIEW QUEUE

55 exception rows provide a required next action rather than a guessed correction.

05 Open DASHBOARD

Check A6, D6, G6 and J6 for the formula-derived values 133, 55, 78 and 408.

06 Inspect a record

Compare IN-0007 across RAW INTAKE, CLEANED RECORDS and REVIEW QUEUE; the missing stock count remains unresolved.

07 Check duplicate groups

Verify that duplicate-SKU candidates remain separate and are not silently merged.

Integrity note: This is a process demonstration using synthetic data. It does not claim warehouse counts were physically verified, or that any real company achieved these results.

File: Fink_Dataworks_Industrial_Inventory_Rescue.xlsx | 7 sheets | source rows retained: 133 | review required: 55 | safe edits: 408
